	<ul style="list-style-type: none"> Proposed a new framework to explain GNN link prediction for recommendation on graph data, which improves user trust in the model and helps developers to debug the model. 	

- The implemented framework turns will be incorporated into the Amazon Neptune ML project in production. Work published in WWW 2023.

Snap Research

Research Intern, Computational Social Science Team

Los Angeles, CA

June 2021 - Sept. 2021

- Proposed a cross-model distillation framework to transfer knowledge from GNNs to MLPs, which speeds up model inference by 179 times and facilitates model deployment on latency-constraint applications. Work published in ICLR 2022.
- Worked on condensing large-scale training graphs to small synthetic graphs by over 90% reduction rate while maintaining competitive model performance for GNNs trained from scratch, which significantly saves storage space and achieves efficient continue learning. Work published in ICLR 2022.

WeWork Inc.

Data Scientist Intern, Research and Applied Science Team

Palo Alto, CA

June 2019 - Sept. 2019

- Implemented a data processing pipeline in SQL and Python for data querying, data cleaning, and feature engineering.
- Trained a Gradient Boosted Tree model on two million customer data to predict occupancy rate for WeWork buildings and achieved 0.093 MAE on the test set.
- Presented the pricing model as a selected outstanding project to the Research and Applied Science team including the VP.
